GreenPath

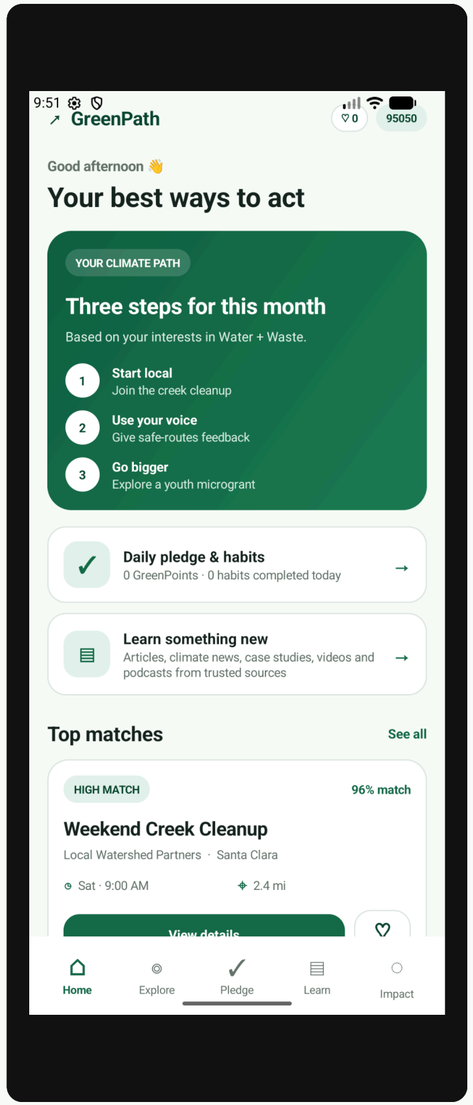

From climate concern to local action.

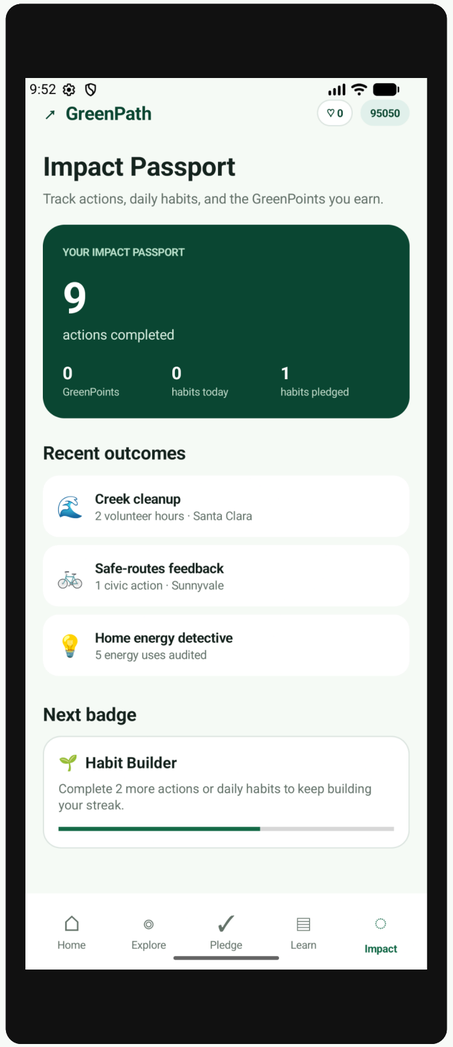

A student-focused app for finding local climate opportunities, building daily habits, learning, and tracking impact.

Explore | Pledge | Learn | Impact

Reyaansh Gadia

9th Grade, Santa Clara High School
49ers STEM Leadership Institute

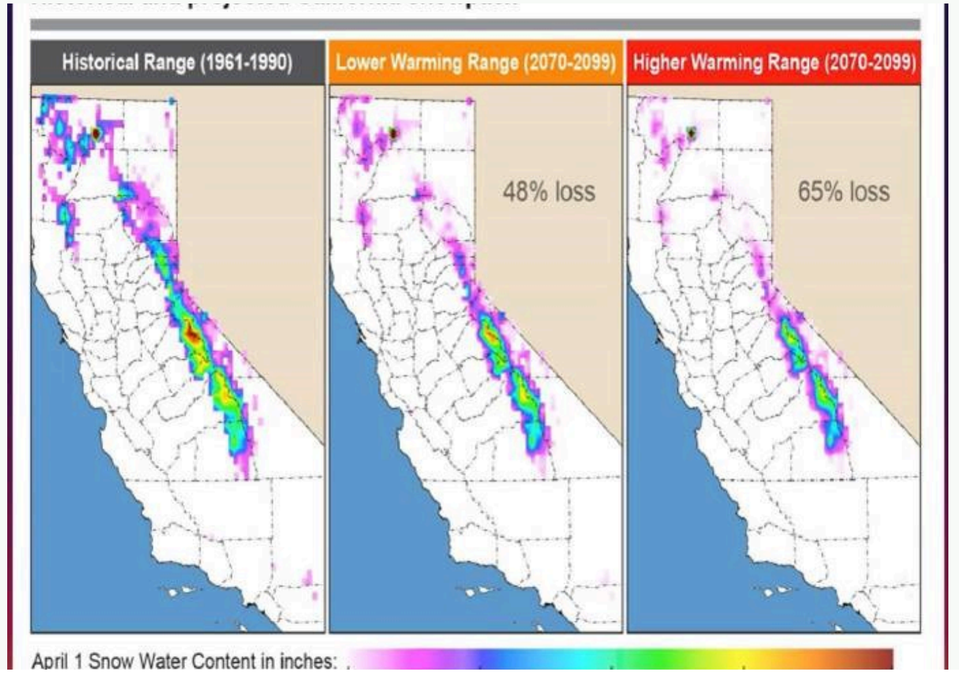

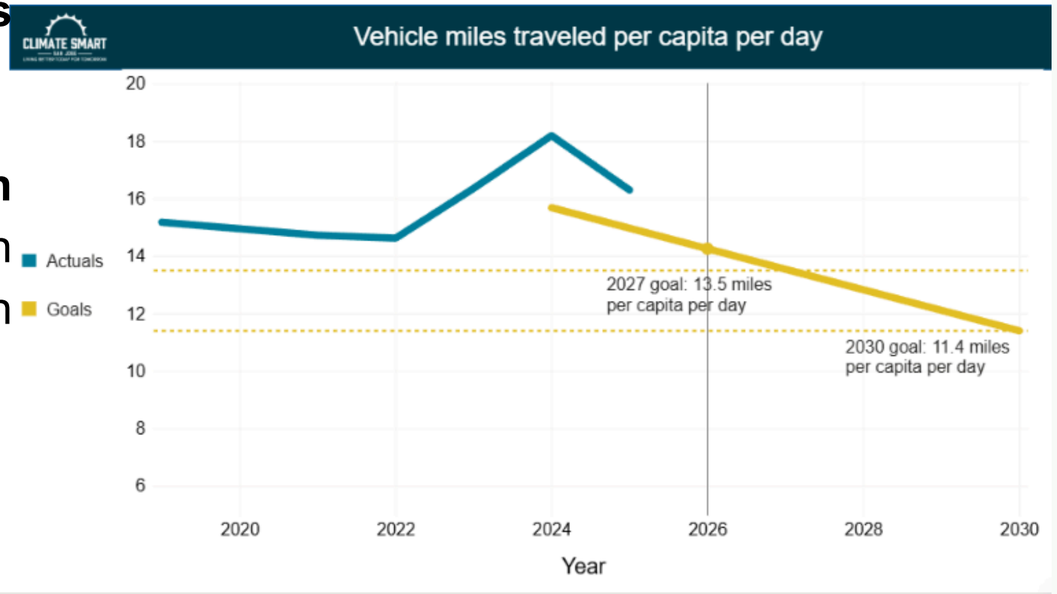

“California has already warmed about 2.5°F since 1895—and 9 of the 10 warmest years in the state’s recorded history have occurred since 2014.” *- CA State Environmental office*

“California’s water system depends on snow that is disappearing.” Sierra Nevada snowpack can provide **as much as one-third of California’s water supply**, yet the state projects a **48%–65% loss in historical April 1 snowpack by the end of the century**. *- CA State Water office*

“Wildfire is no longer an occasional California disaster.” In **2025 alone**, California recorded **8,232 wildfires, more than 507,000 acres burned, 16,627 structures destroyed and 31 fatalities**, - *Cal Fire*

“Even in a state leading on electric vehicles, transportation remains California’s biggest climate problem.” Transportation accounted for **~37 of greenhouse-gas emissions in 2023**, with passenger vehicles alone representing 28.3% - *CA Air Resource Board*

What inspired me to build GreenPath?

A problem I experienced myself became the idea for the app.

1

5th grade • Arrow of Light

A World Conservation project made me curious about climate action and the choices I make every day.

2

Life Scout • Service hours

I learned that the hardest part was often finding, organizing, and confirming age-appropriate opportunities.

3

The gap I noticed

Only a small part of my service involved climate action, and useful information was scattered across many websites.

4

The question that stayed with me

“If I want to help, where do I start?”

Who is GreenPath for?

Students who want to help their communities, but do not know where to start.

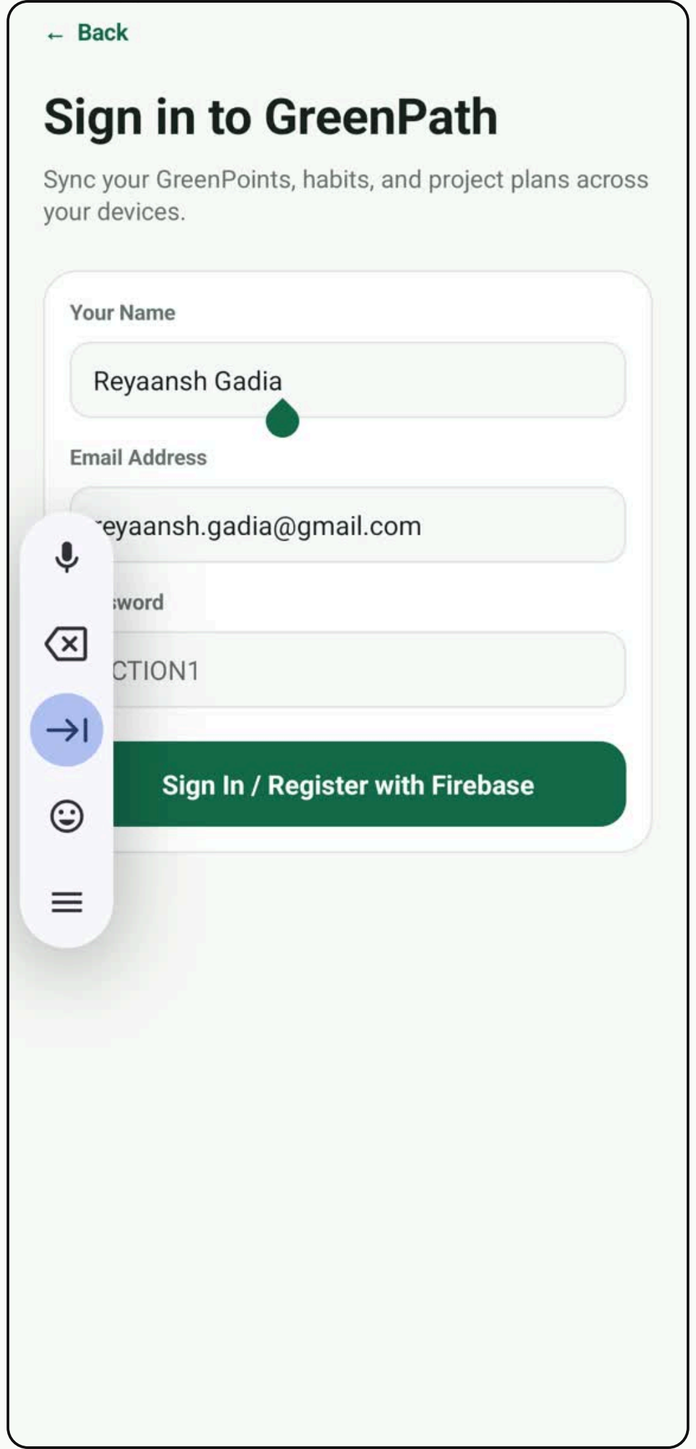

The problem

- **Opportunities are scattered**
- **Eligibility is unclear**
- **To much confusion and effort**

GreenPath turns that into one simple journey

1. **Tell us about you** — Age, ZIP, interests, availabi
2. **Discover** — Local opportunities that fit
3. **Act & build habits** — Pledges, reminders, daily ac
4. **Learn & track** — Resources, points, Impact Passport

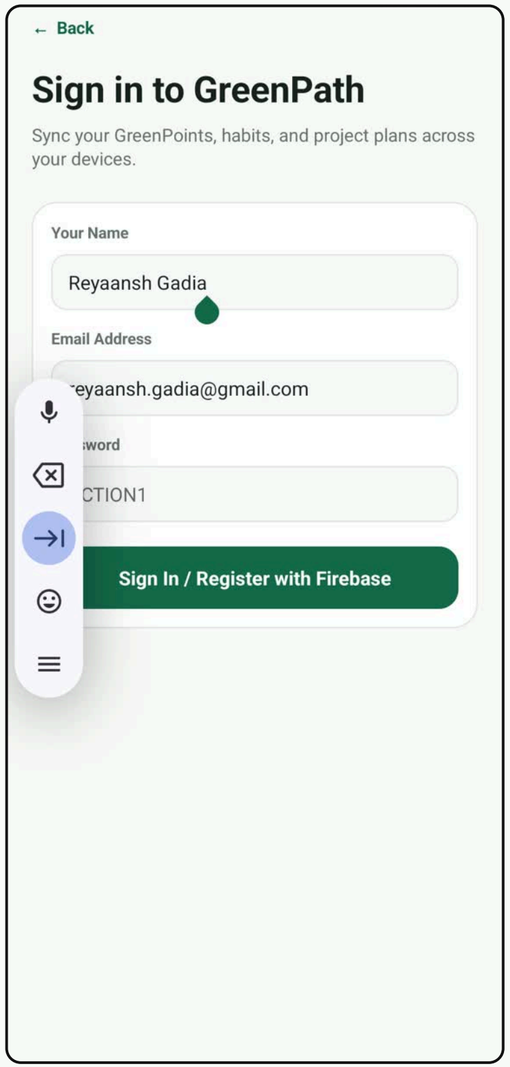

GreenPath User Journey Demo Video

GreenPath Features

1. Discover opportunities that fit

Browse local volunteer events, projects, grants, learning activities, and civic opportunities.

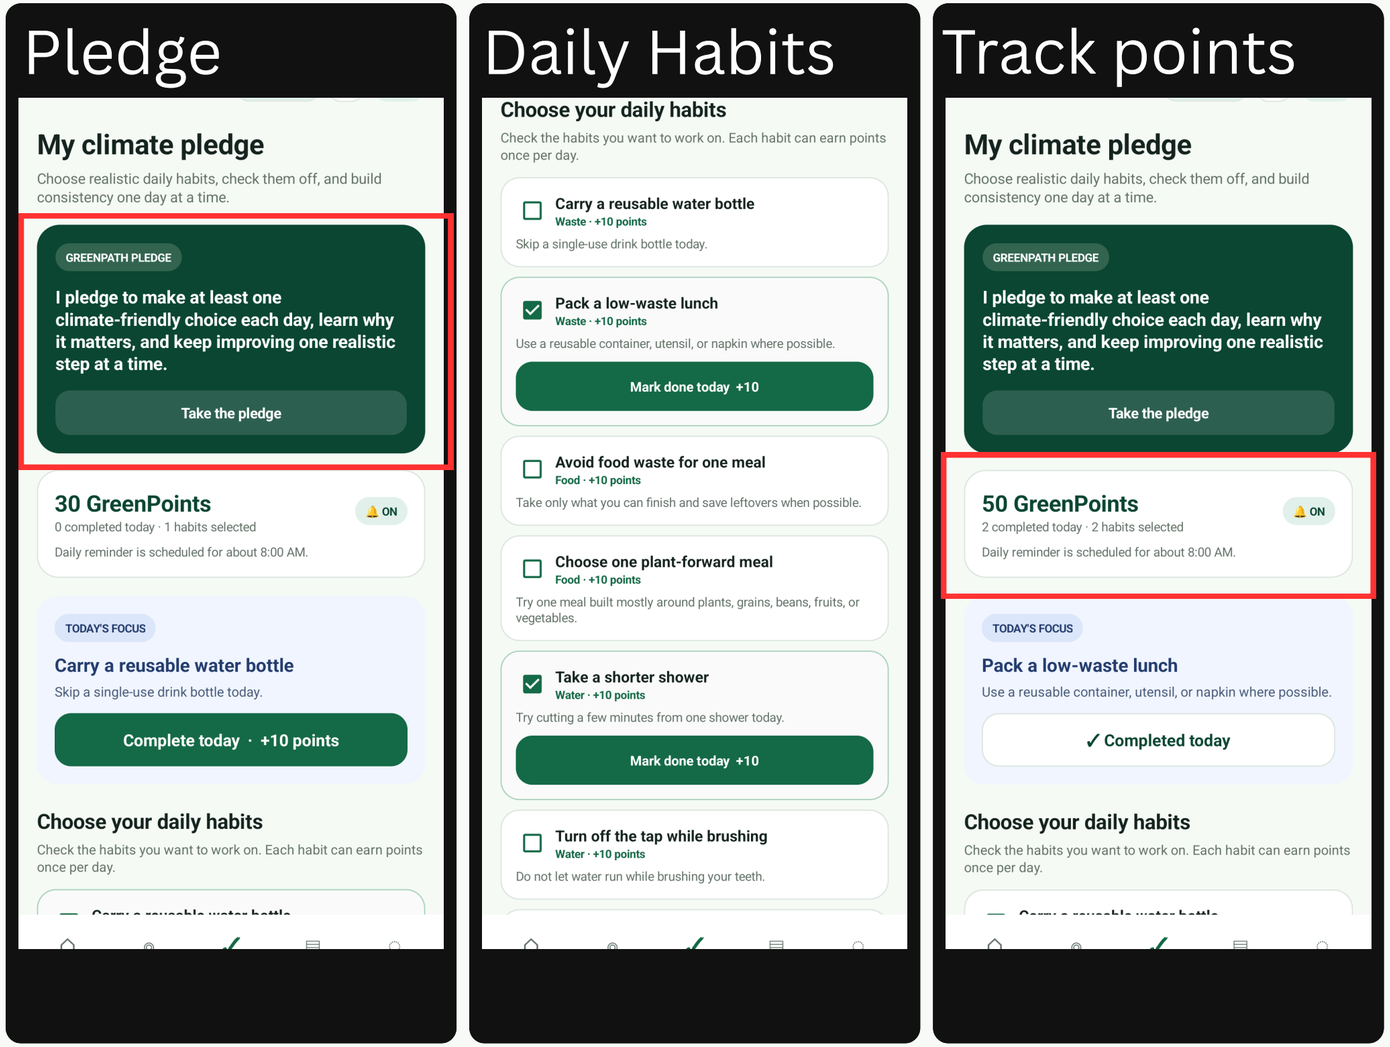

What the student sees

- **Search and categories**
  Quickly narrow opportunities by the type of action a student wants to take.
- **Useful details at a glance**
  Date, location, distance, age eligibility, category, organization, and a clear next step.
- **Save or act**
  Students can save an opportunity for later or open the official source to learn more and register.

GreenPath User Journey

2. Turn climate action into a daily habit

Pledge → choose habits → get one daily focus → earn GreenPoints.

How it works

Take the pledge — Start with a simple commitment to better choices.

Pick habits — Choose water, energy, food, waste, or transportation habits.

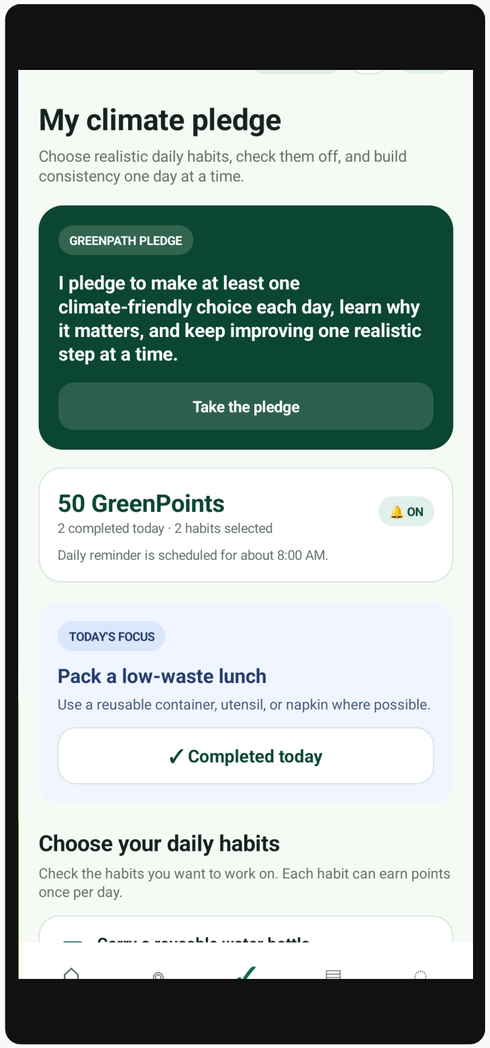

Daily focus — GreenPath highlights one habit to work on today.

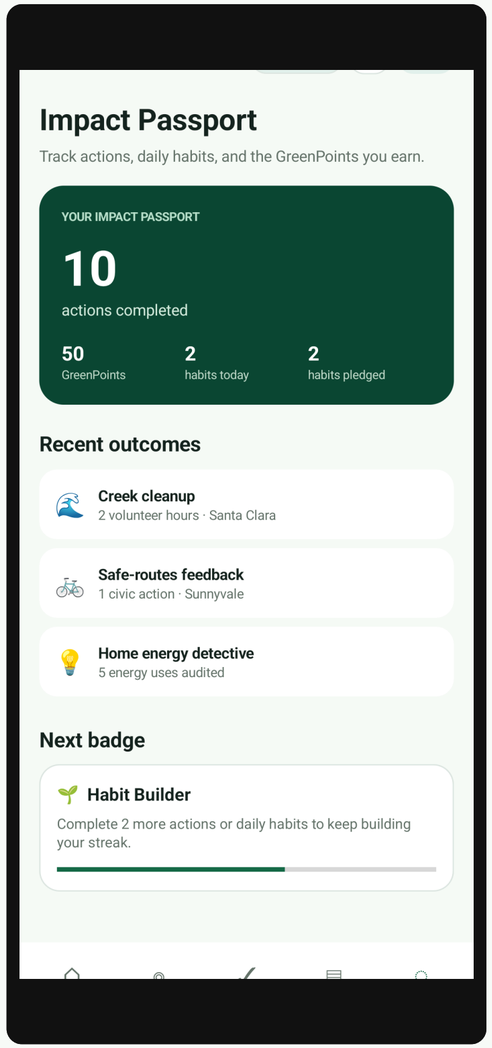

Earn points — Each completed habit adds GreenPoints and builds progress.

GreenPath User Journey

3. Reminders + progress

A gentle daily reminder helps students remember the habit they chose.

The feedback loop

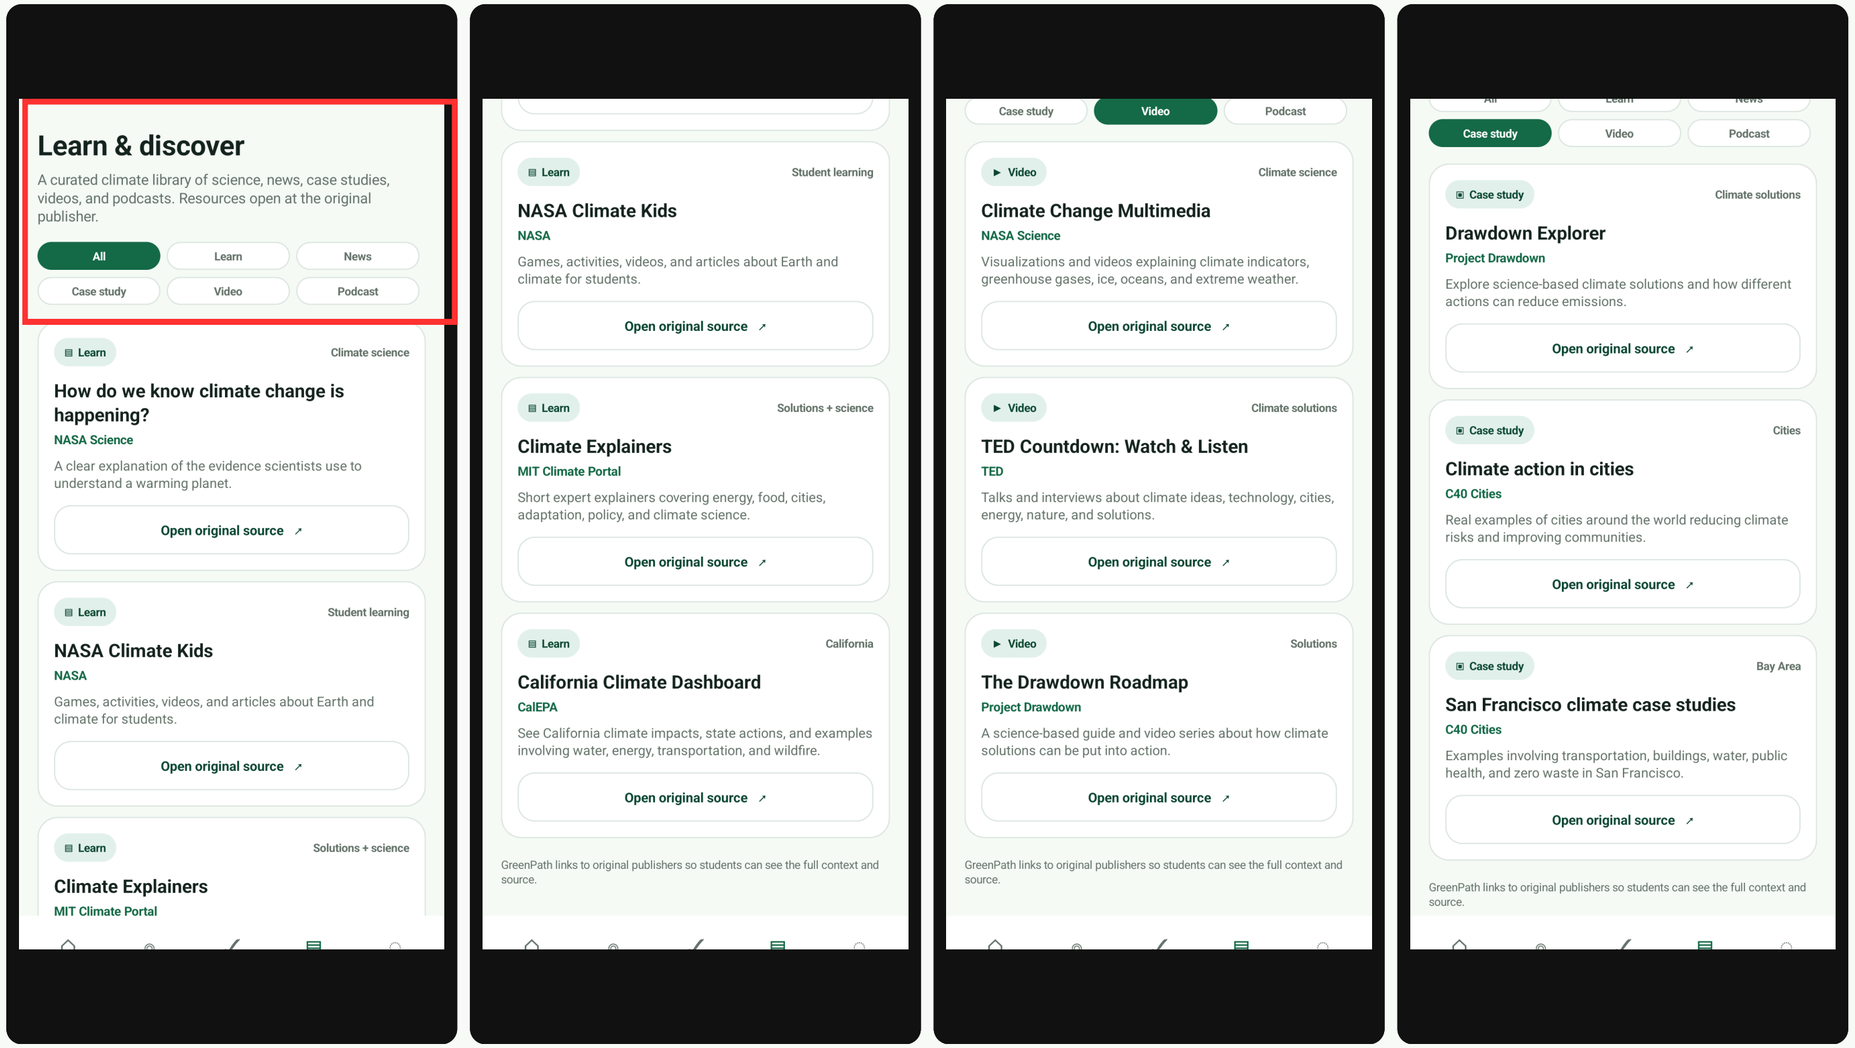

- Choose a habit
- Receive a reminder
- Complete it
- Earn points
- **See progress**

GreenPoints are motivational app points — not financial carbon credits.

GreenPath User Journey

4. Learn from trusted climate resources

Articles • news • case studies • videos • podcasts

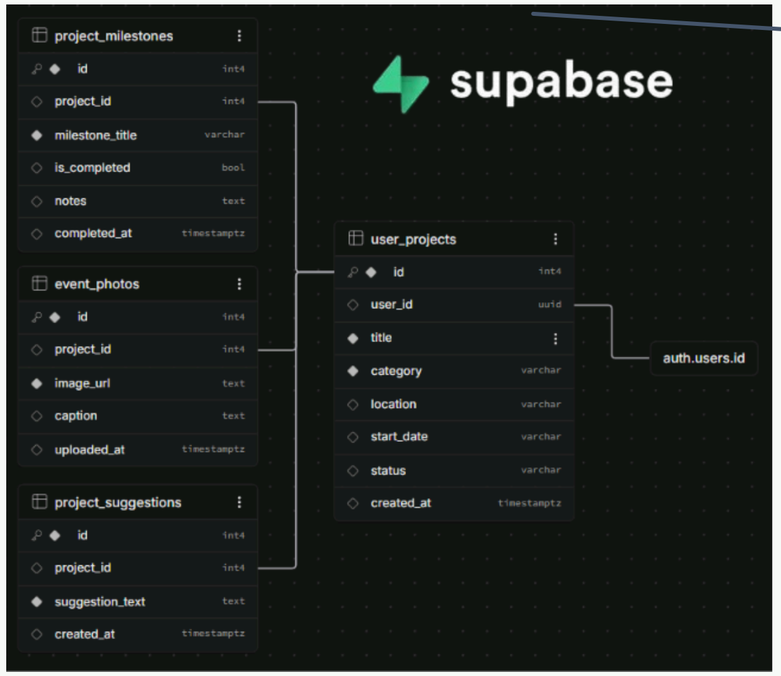

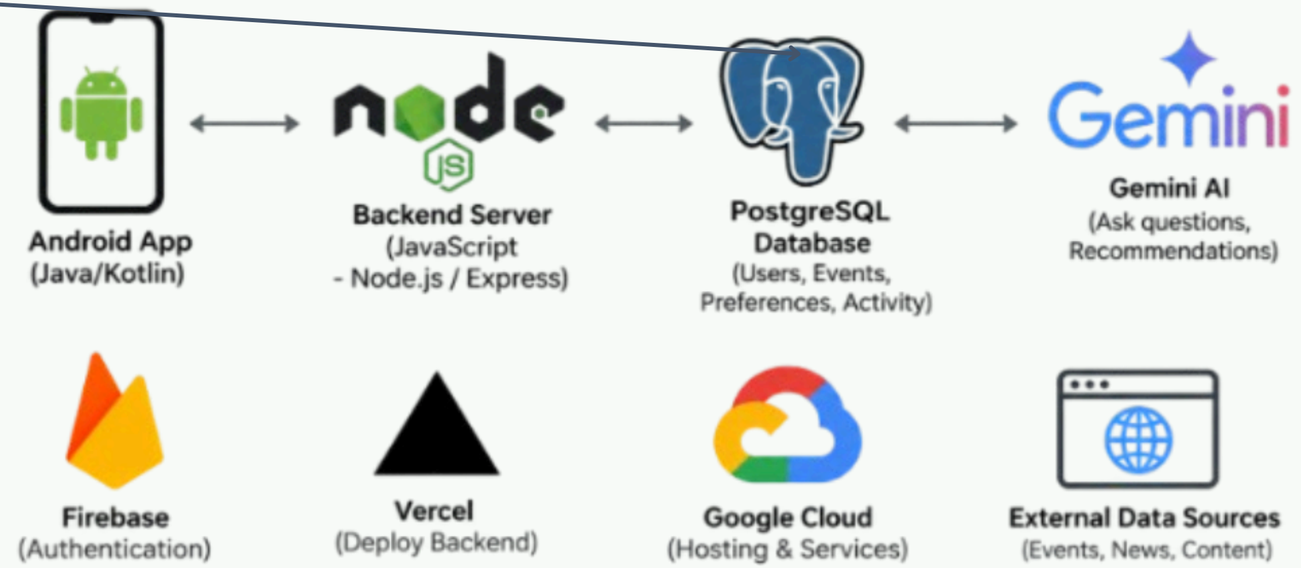

Why it matters

GreenPath does not copy full articles or videos. It creates a curated library and sends students to the original trusted source.

The goal: make learning easy enough to become part of the same daily climate-action journey.

What is GreenPath Architecture?

Android UI

Screens, buttons, navigation, opportunity cards, pledge and learning views

App logic

Java classes organize opportunities, habits, points, saved items, and user actions

Local storage

Preferences and progress remain available after the app closes

External sources

Public APIs, feeds, and original web sources can supply updated opportunities and learning content

Future of GreenPath

Make climate action easier to build, expand, and continue.

1 Smarter Project Builder

- Turn a local problem into a clear project plan
- Find partners, volunteers, grants, and funding
- Create a simple timeline, budget, and application checklist

2 Expand Beyond Local

- Start with nearby cities and verified local sources
- Grow across California and then the United States
- Eventually connect students to opportunities around the world

3 Rewards for Better Habits

- Build on the current pledge and habit tracker
- Earn GreenPath Climate Credits for sustained actions
- Invite local businesses to sponsor meaningful rewards

Live feeds
More current opportunities

Better matching
Age • interest • location

Maps & search
Find what is nearby

Alerts
Deadlines & reminders

Verification
Trusted sources

Impact Passport
Stronger progress tracking

Use STEM and technology to connect personal habits, local action, community support, and long-term climate awareness.

GreenPath

Learn. Discover. Act. Build better habits.

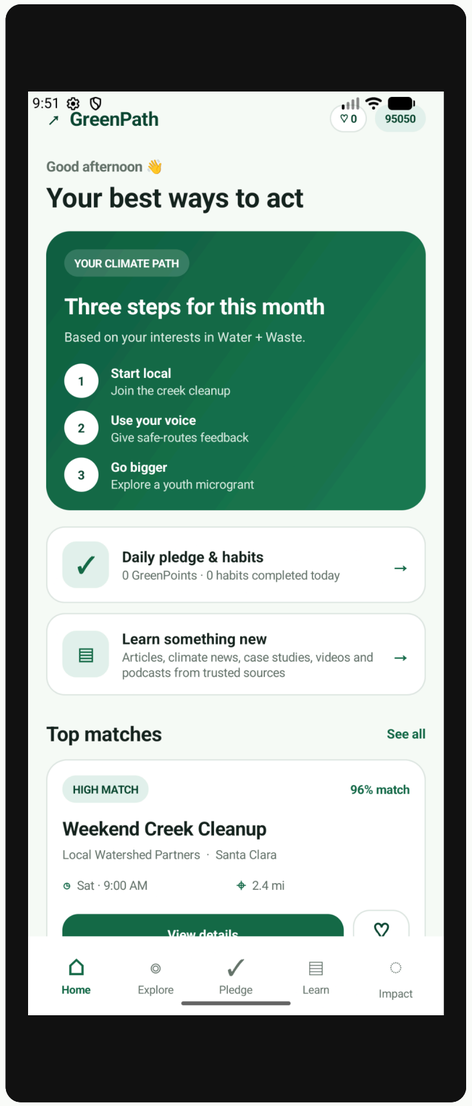

GreenPath helps students find simple, meaningful ways to take climate action in their own communities — while learning, building everyday habits, and tracking their progress.

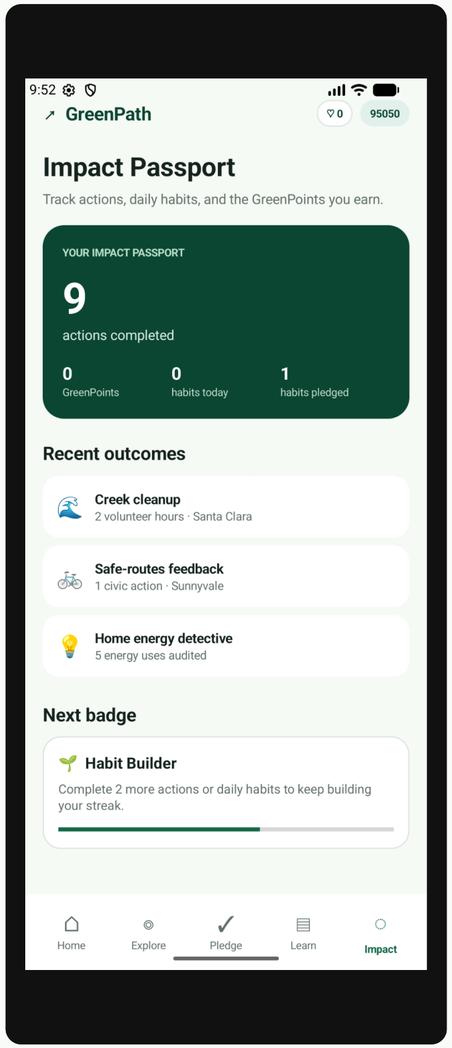

DISCOVER
Local opportunities that fit you

BUILD
Better daily habits

LEARN
Trusted climate resources

Small actions + better habits + easier access to opportunities can help create more climate-informed communities.
